Quick Guide ATMOS® C 051 Thorax

This Quick Guide does not replace the operating instructions. Always carry out steps 1 - 4 under sterile conditions.

Set up and switch on

1. Connect canister to device
2. Connect hose system to secretion canister
   - Do not overtighten the Luer-Lock connections!
3. Adapt the connector of hose system to hose end at patient side
   - Check the Luer-Lock cap of connector for tightness!
4. Cover the connector

5. Switch on the device
   - Leakage test starts automatically!
6. Only proceed if the leakage test is passed!
   - Only proceed shortly before patient is connected!
7. Start a new therapy or continue with the existing therapy

8. Set target vacuum with + / -
9. Adapt the connector to patient catheter
10. Start therapy

Exchanging secretion canister

1. Prepare a new secretion canister
2. Clamp the patient catheter
   - Do not clamp the hose system!
3. Deactivate the keylock
4. Stop therapy
5. Remove hose system from secretion canister
6. Remove secretion canister
7. Cover pop-off-valve, bacterial filter and secretion channel with appropriate covering caps
8. Dispose of correctly
9. Connect a new secretion canister

10. Connecting the hose system
11. Start therapy again
   Wait until the actual vacuum corresponds to the target vacuum!
12. Remove the clamp from patient catheter

Warning messages
In the event of a fault, warning messages will sound. Error cause and troubleshooting are displayed, e.g.

Vacuum too low
Check the following components for leakage and if applicable correct attachment:

- Connection from hose system to patient catheter
- Connection from hose system to canister system
- Secretion canister connection

Check the following components for blockages and if applicable exchange:

- Bacterial filter in canister system
- Hose system
- Kink in hose system
